

Same Footprint – Less Cost

An Automated Guided Vehicle System can be an integral part of an effective warehouse automation strategy to replace manned lift trucks. Automation with AGVs provides both increased throughput and reduced operating costs with little or no change in the existing facility or rack configuration. Because of its flexibility and ease of interface with existing equipment and technology, an AGV system does not add to process complexity.

Automated Guided Vehicles offer a compelling alternative for conventional warehouse operations as they provide significant and immediate reductions in operating costs, increased accuracy and reliability, reduced product and facility damage and greater energy efficiency.

Discover how an AGV System can improve your supply chain performance. Download "[Automate the Conventional – Same Footprint, Less Cost](#)" whitepaper, part of an educational series developed by HK Systems. Or visit automatetheconventional.com or call **1-800-HKSYSTEMS** for more information.
